

The basketball height adjustment device, to backboard 90x120cm

Description

The basketball height adjustment device, to backboard 90 x 120 cm, height bearing system, steel, powder coated, used in gyms or sports halls.

The mechanism of height adjustment of the basketball backboard allows you to adjust the backboard from a height of 305cm - professional game - for training use 260 cm (junior) - for children and adults, usually for recreational or training purposes.

Together with the mechanism, we equip the handle to handle the structure of the mechanism.

Designed for basketball structures with a 90 x 120 cm backboard - epoxy or acrylic backboard.
