

The basketball construction, backboard projection between 180-250cm

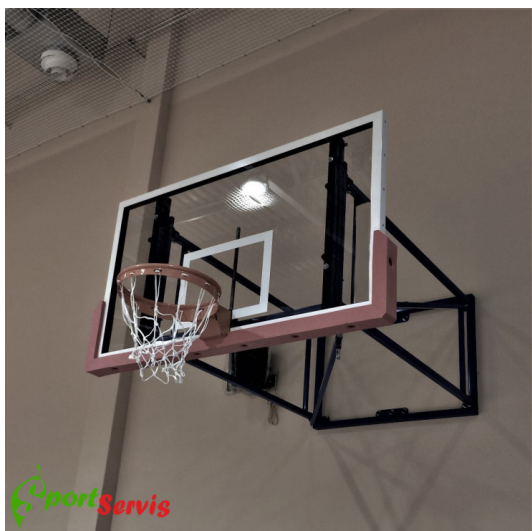

Description

The basketball construction, side folded to the wall, project of backboard between 180-250cm, fixed to the wall or post.

The basketball construction is intended for use mainly in sports halls - indoor, but can be after customisation installed outdoor. The construction is adapted to all types of backboards and basketball rings. Additional equipment is a mechanism for height adjustment of the backboard in the range of 2.6m (junior) and 3.05m (senior). Powder coated construction according to the RAL palette (color on request)

To unfold / fold the basket structure, use a special handle, which should be inserted into the eyelet of the structure securing / locking. By pulling down the handle the lock is released, pull it sideways by the handle until the structure is fully folded on the wall.

The basketball backboard, ring, net, height adjustment mechanism and, if applicable, bottom padding protection are a separate item in our offer.
