

The wall barcket for ball cather

Description

The steel wall barcket for ball cather hanging, made of 40x40x2mm profile, powder painted, color acc. available RAL palette.

The bracket is the distance between the protective net on the gable walls and in places where the protective net is attached. There is a steel cable between the stretching brackets, which when stretched is the source of the net holder.

The brackets are designed individually for installation.
