

The socket to the football goal

Description

The socket to the football goal, aluminum professional, made of reinforced steel profile with a diameter of 133mm, round with a welded stop for the goal profile (drainage function), which allows for collision-free drainage of water in rainy conditions. The construction of the socket is stable, massive, all hot-dip galvanized, which avoids corrosion of the material.

The product is compatible with goals made of 100x120mm aluminum profile (football goals 7,32x2,44m and 5x2m).

Technical details
