

Telescopic Stadium Tunnel - Retractable Players Tunnel

Description

Telescopic pantographic tunnel, designed for sports fields and stadiums, to cover and create a safe corridor for players.

The tunnel structure is made of 45.5 x 59 mm aluminum profiles, the dimensions of the tunnels are made as needed - the tunnel depth after folding is max. 161 cm - depending on its length.

Covering with PVC material 860g per m². The color of the material according to the available colors from the RAL palette (on request and to be confirmed), it is possible to print / club logo or other advertising materials. Pneumatic running wheels, using a guide or ordinary nylon (polyamide) wheels.

The tunnel has the possibility of fixing to the wall and to the surface. Connecting tunnel elements longer than 10m is done with connectors made of PVC material.

The tunnels have the option of making windows from high-quality UV-resistant folia. The tunnel entrance and exit can also be protected by PVC material.

The structure contains blockades against arbitrary unfolding of the structure. Due to the fact that it is a full aluminum construction, there is no need to store it against the harmful effects of rain, snow or moisture.

Due to the fact that this is a product made to order, we do not have this product in stock.
